

Infrastructure - Task #1078

Bug # 1076 (Closed): mn.create() not encoding PIDs correctly.

encoding function needed for identifiers in the param section of urls

2010-11-15 18:45 - Rob Nahf

Status:	Closed	Start date:	2010-11-15
Priority:	Urgent	Due date:	
Assignee:	Rob Nahf	% Done:	100%
Category:		Estimated time:	1.00 hour
Target version:	Sprint-2011.01	Story Points:	
Milestone:			
Product Version:	*		
Description			
MNode has two methods that pass the identifier as a url parameter [setAccess(), handleCreateorUpdate()]. Encoding rules may vary from those for path segments. Need to modify encodeIdentifier function to avoid confusion and do the right thing for both cases.			

History

#1 - 2010-11-15 23:26 - Rob Nahf

- Status changed from New to Closed

Refactored the encoding utility function to encode "query segments" (parts of URI query section between the delimiters "&" and "="), and created unit tests for the new methods.
