Target version:	Sprint-2010.46	Story Points:	
Milestone:			
Product Version:	*		

Description

the "+" char is an interesting case: older URL parsers will convert it to a space when decoding.
Between CNs and MNs it should not be an issue, but with clients, it will be (we don't control those)

Although D1Node.java globally escapes '+' in the URL, we need to do it in the EncodingUtilities so that the exception is noted in the de facto authority in the code as to how we do encoding.

History

#1 - 2010-11-16 21:53 - Rob Nahf

- Parent task changed from #1034 to #1080

#2 - 2010-11-16 23:45 - Rob Nahf

- Status changed from New to Closed

made addition, unit tested and checked in.
