<b>Description</b>			
I performed an apt-get upgrade for the following packages:			
root@cn-ucsb-1:~/bin# apt-get upgrade			
Reading package lists... Done			
Building dependency tree			
Reading state information... Done			
The following packages will be upgraded:			
bsdutils dataone-cn-mercury dataone-cn-mnsynchronization			
dataone-cn-rest-service libblkid1 libdbus-1-3 libservlet2.5-java			
libtomcat6-java libuuid1 mount sudo tomcat6 tomcat6-admin tomcat6-common			
util-linux			
The /var/lib/tomcat6/webapps/knb and knb.war were deleted afterwards though the package reports as still being installed.			
Maybe need to check on explicit dependency between tomcat6 and dataone-cn-metacat and other dataone packages?
