Description

As discussed during standup today, Metacat is not returning the name of the exception when an error condition is encountered. For example:

curl -H "Accept: text/xml" "http://knb-mn.ecoinformatics.org/knb/d1/object/bogus"
<?xml version="1.0"?>

Document not found:bogus

The response should be something more like:

<?xml version="1.0"?>

Document not found:bogus
