- % Done changed from 0 to 50

There are diagrams for three scenarios:

1. register two identities (accounts) as equivalent in DataONE (register, map)
2. register an untrusted account and have admin verify it (register, verify)
3. manage user group (create, add, remove)

I think it would be useful to continue these diagrams on the Identity Service implementation side of things. Currently it's a very client-specific perspective.
