Description

Upgrade to the latest version of JibX 1.2.3.

Upgrading will solve the problem where Lists getter and setter methods were pluralized resulting in odd naming convesions such that the DescribedByList would be called by a method named 'DescribedBies'. DataONE circumvented this naming by using the replace ant task in all offending classes.

Added pluralize()/depluralize() methods to org.jibx.schema.codegen.extend.NameConverter interface

There is also a changes to how Java 5 enums are produced (probably for the better)

Changed Java 5 enum default serialization to use the name() method, rather than the toString() method

Changed Java 5 enum code generation from schema to add an xmlValue() method where needed to supply the actual text to be used in a document, rather than overriding toString()
