listPrincipals() and getPrincipallInfo() are currently close to identical -- need to chnage getPrincipallInfo() to differentiate it as applying to a Person, or maybe eliminate it altogether.

I've taken to thinking of getPrincipallInfo as:
getPrincipallInfo(cert, Types.Principal) returning Types.Person. This would allow someone who was trying to "verify" an identity to actually look up the details of the Principal in question. The cert might be optional depending on how much information about users is allowed to be public (or required if none is meant to be public).

getPrincipallInfo(cert, principal) now returns a Person representing the Principal argument (which includes equivalent IDs and Group membership details)
