

Infrastructure - Bug #1586

ObjectLocation uses Identifier rather than Nodereference as type for nodeIdentifier

2011-05-24 01:08 - Dave Vieglais

Status:	Closed	Start date:	2011-05-24
Priority:	High	Due date:	
Assignee:	Dave Vieglais	% Done:	100%
Category:	d1_schemas	Estimated time:	0.00 hour
Target version:	Sprint-2011.21-Block.3	Story Points:	
Milestone:			
Product Version:	*		
Description			
NodeReference and Identifier both derive from NonEmptyString, but NodeReference is defined as a simple type whereas Identifier is a complex type.			
A: Is there a need for NodeIdentifier and Identifier to be separate?			
B: If so, should NodeIdentifier be a complex type.			

History

- Position set to 1

#2 - 2011-05-31 13:56 - Dave Vieglais

- Status changed from New to Closed

Changed ObjectLocation.nodeIdentifier to a NodeReference type from an Identifier type.

This change is committed in the trunk.
