Milestone:	CCI-0.6.3	**Story Points:**	
Product Version:	*		

Description

NodeListParser hits the schema location in order to validate an xml stream provided to it.

It should be using JibX for deserialization and morphing into map structure rather than w3c DOM & xpath.

Also, is this class really needed in common? If it is a metacat helper class, then maybe the method should move into Metacat. Otherwise, there are other NodeList helper classes that are in use by other projects.

History

#1 - 2011-08-01 15:58 - Robert Waltz

- Status changed from New to Closed

- Target version set to Sprint-2011.28-Block.4

- Milestone set to CCI-0.6.3
