

Infrastructure - Story #1705

Create test subdomain

2011-08-22 18:57 - Dave Vieglais

Status: Closed	Start date: 2011-08-22
Priority: High	Due date:
Assignee: Dave Vieglais	% Done: 100%
Category:	Estimated time: 0.00 hour
Target version:	
Story Points:	
Description We need to emulate the dataone production environment in a test environment, including SSL connections between various pieces. Instead of copying the *.dataone.org cert to multiple, potentially insecure locations we will be setting up a subdomain "test.dataone.org" and manage our own CA for that subdomain. The changes required include: DNS creation of subdomain DNS transfer of existing names to subdomain Update of node list Creation of a CA Issuing of wildcard cert for all, or specific certs for each test server. Installation of CA cert on all machines involved in test domain.	
Subtasks:	
Task # 1706: Create a DNS subdomain "test.dataone.org"	Closed
Task # 1707: Create a Certificate Authority for test.dataone.org	Closed
Task # 1708: Update node list to reflect test.dataone.org	Closed
Task # 1711: Additional DNS entries for test.dataone.org	Closed
