Target version:			
Milestone:	CCI-0.6.4	**Story Points:**	
Product Version:	*		

Description

Need to setup and secure a certificate authority that will act as the root for test.dataone.org

This will be used to sign a wildcard cert "*.test.dataone.org" to be handed off to the servers as necessary.

It will also be used to act as the root for long lived test client certificates for testing authenticated access between nodes.

History

#1 - 2011-08-22 19:16 - Matthew Jones

I suggest that this be a CA for dataone.org, which can then be used to sign certificates for *.test.dataone.org servers as well as others if we decide to do so later.
