Description

The docs state: "the checksum of the bytes retrieved must match the SystemMetadata.checksum recorded in the Types.SystemMetadata if the object is science data". I think we can take out the "if the object is science data" part because the checksum needs to match regardless.

History

#1 - 2011-11-03 20:09 - Dave Vieglais

- Status changed from New to Closed

There is the potential that science metadata checksums may change in the future (to support for example, a lossless translation to another format), but if they were to change then we'd need another mechanism to guarantee that the information content has not changed.

Comment was updated as suggested.
