Target version:	Sprint-2012.01-Block.1.1	Story Points:	
Milestone:	CCI-1.0.0		
Product Version:	*		

Description

Timezone information should be explicitly included with datetime object creation, otherwise values will use the timezone of the system on which the interpreter is running.

e.g. test_010(self) in test_utils.py will fail if not run in Mount Time zone.

Create a UTC class derived from TZInfo, add to utils.py. Use the UTC class when creating dates.
