Target version:	
Story Points:	
Description UnsupportedQueryType exception has been removed, and I think the documentation needs to indicate which exception is thrown when the value of queryType ("qt" actually) is not recognized. choices: InvalidRequest NotImplemented I think InvalidRequest would be most consistent, and the service should indicate in the exception description which query types are supported.	
Subtasks: Task # 2164: remove UnsupportedQueryType from d1_common_java Closed
