- Category set to Metacat

- Assignee set to Ben Leinfelder

We've been using this for a while, but it looks like we get the complete string representation of an incoming XML document when we add it to metacat. I believe the traditional Metacat API also deals with the full string content in memory, so this may be a larger issue not just specific to DataONE.

#2 - 2012-03-26 17:14 - Ben Leinfelder

- Status changed from New to Closed

Massive documents run the risk of using all the server's memory. This is unlikely to happen in the realworld given our current KNB data.
