

Infrastructure - Bug #2587

schema annotation in Node type is out-of-date with implementation

Description	
the annotation for the node / identifier element is incorrect, stating the value can be the same as the basurl. New business rules ("urn:node:" prefix) disallow this. We need to either to update annotations such as these with current business rules, or decouple "helpful hints" from the schemas, by instead referencing documentation. xs:annotation xs:documentation A unique identifier for the node. Although this may initially be the same as the <i>baseURL</i> , such practice is not recommended however as this value MUST NOT change for future implementations of the same node, whereas the <i>baseURL</i> may change in the future. /xs:documentation /xs:annotation

The Architecture docs are created from the schema annotations, so we definitely need to fix the annotations in the schema to be correct. So, this is a bug, and one that needs to be fixed. As it is only a documentation bug and not a schema change, we probably do not need to do a new schema release for this.

just a note: prior to registration to an environment, the value can be anything, but node registration provides limits on this field (business rules), so needs to follow the "urn:node" rules found here: <http://mule1.dataone.org/ArchitectureDocs-current/design/NodeIdentity.html?highlight=urn>
