Description

If the hazelcast client is unable to connect to the cluster, then LDAP should be updated with new information regardless.

q: Which brings up the problem of how to notify the cluster members when client is able to connect again? a1: hzProcessing needs to reschedule quartz jobs when it identifies a new cluster member joining. a2: try to connect to any hzMember as noted in the node.properties file if localhost fails. if they all fail, then perform updateNodeCapabilities only in LDAP
