Story # 2680 (Closed): MN.getReplica() should be a Tier1 method

Ensure getReplica method is supported in Mercury MN implementations

Description

A recent correction in the DataONE APIs corrects an oversight that would prevent replication of content from a Tier 1 member node such as the Mercury based nodes.

A method "getReplica" has been moved from Tier4 to Tier1, and so must be supported.

For a Tier1 implementation, getReplica is the same as a regular "get()" operation except that the call is logged as a "replica" event instead of a "read".

The method is documented at: http://mule1.dataone.org/ArchitectureDocs-current/apis/MN_APIs.html#MNReplication.getReplica
