History

#1 - 2012-06-11 21:39 - Ben Leinfelder

- Subject changed from Install DataONE CA to Install DataONE CA (ESA, PARC)

Ready for editing as needed:

/etc/apache2/sites-available/org.esa.data-ssl

/etc/apache2/sites-available/org.palmyraresearch.data-ssl

the PARC node will need to accept commercially-signed certs - at least from the KNB node - for Metacat replication.

#2 - 2012-06-15 13:16 - Ben Leinfelder

- Status changed from New to Closed

After we discovered a duplicate DataONE cert in the chain on SANParks, Chris also updated the copy on mn-ucsb-2. We are using this for ESA MN.
