Target version:	Sprint-2012.35-Block.5.2	Story Points:	
Milestone:	CCI-1.0.0		
Product Version:	*		

Description

When we are done with the Metacat upgrade, the /etc/hosts entry need to be updated:

"/etc/hosts" will have this line:

```
128.111.36.83 knb.ecoinformatics.org knb knb.nceas.ucsb.edu ecogrid.ecoinformatics.org data.nceas.ucsb.edu
```

And DNS needs to be switched for each of those aliases.

History

#1 - 2012-06-12 22:54 - Matthew Jones

To change the hostname, change two files:

1. /etc/hostname -- should have a value such as "knb"
2. /etc/hosts -- should have an address line for the right IP number that contains both the hostname and the FQDNs that are aliases

Restart (or at least run /etc/init.d/hostname.sh).

#2 - 2012-06-15 13:14 - Ben Leinfelder

Nick updated the other aliases in DNS as well.
