Target version:	CCI-0.4		
Milestone:		**Story Points:**	
Product Version:	*		

Description

The current CN Buildout makefile configures apache and assumes that the *.dataone.org wildcard certificate is installed. Developers need to be able to run the buildout on development machines and generate a self-signed certificate that works. Modify the Makefile in cn_buildout to generate and install this certificate on apache.

History

#1 - 2010-08-12 16:41 - Matthew Jones

- Status changed from New to Closed

No longer needed, as we use the dataone wildcard cert for dev machines too.

#2 - 2010-10-27 16:12 - Dave Vieglais

- Category changed from d1_cn_buildout to d1_cn_service
