Following up on Conversation with John Cobb at July Knoxville meeting

This is a relevant metacat based project located in Spain.

While MN has been identified, MN contact points have not been identified.

Moved to deferred state until POC's are identified and realistic target deployment identified

iEcolab runs this server to house data from the Sierra Nevada LTER site in Spain. Their information system is described here:

http://asm2012.lternet.edu/sites/default/files/poster_linaria_01092012.pdf

I just checked and they are running Metacat 1.9.2, so would need to upgrade. Their site would benefit from the new default Metacat UI as well, so it might be worthwhile to them.
