Description			
<p>The method - <code>public static T unmarshalTypeFromFile(Class domainClass, File file)</code>, is using the <code>FileReader</code> object to reader the file. That means it uses the default character encoding. If we use the <code>InputStreamReader</code> instead, we can specify the character encoding, e.g <code>utf-8</code>, which is good for internationalization.</p> <p>If we want to stick to <code>FileReader</code> in this method (we have <code>unmarshalTypeFromStream(Class domainClass, InputStream inputStream)</code> as the alternative), at least in the java doc we should let user know - it is use the default character encoding.</p>
