Description

The method - `public static T unmarshalTypeFromFile(Class domainClass, File file)`, is using the `FileReader` object to reader the file. That means it uses the default character encoding. If we use the `InputStreamReader` instead, we can specify the character encoding, e.g `utf-8`, which is good for internationalization.

If we want to stick to `FileReader` in this method (we have `unmarshalTypeFromStream(Class domainClass, InputStream inputStream)` as the alternative), at least in the java doc we should let user know - it is use the default character encoding.
