<b>Description</b>			
<p>AKN is interested in becoming a DataONE Member Node and it is much larger than CLO AKN - Steve Kelling had requested that this MN be called eBird rather than AKN.</p> <p>The current CLOAKN member node will need to be renamed to 'Cornell Lab of Ornithology eBird' in its node documents on the Member Node and in the Node registry on the Coordinating Nodes. The identity provided by the client certificate will also need to change, and the old certificate (urn:node:CLOAKN) should be revoked, new certificates should be generated for 1) urn:node:EBIRD (or urn:node:CLOEBIRD depending on preferences), and 2) urn:node:AKN (if this is amenable). The EBIRD certificate will need to be installed on the current Metacat instance. A new member node instance of Metacat needs to be installed to represent the AKN, with the new certificates installed. We also need to revoke any test certs associated with CLOAKN and generate mnTestEBIRD, and mnTestAKN certificates.</p>
