<b>Description</b>			
<p>The d1-cn-log Solr index currently requires authenticated access, since portions of the log entries are sensitive information. For the d1_dashboard, we need access to the index for various levels of display, both authenticated and public.</p> <p>pid, ipAddress, userAgent, subject, event, dateLogged and nodeId are the fields exposed through the d1 log api call. Of these, ipAddress, userAgent, and subject are sensitive fields. These fields should only be accessible by a 1) CN subject, 2) owning MN subject, 3) rights owner subject or equivalent identity.</p> <p>For the first version of the d1_dashboard application, filter Solr queries to provide public access to only the summary information returned by Solr. This requires that queries by the public user</p> <ol style="list-style-type: none"><li>1) should be accepted</li><li>2) should have the rows parameter set to 0 despite the input prior to executing the query</li><li>3) queries that include facets should redact the ipAddress, userAgent, and subject fields from the facet.field parameter prior to executing the query</li></ol> <p>This will provide general data on total MN CRUD events per pid.</p>
