Description

MN locations (lat/lons) are currently stored in redmine. Update redmine issues for MNs with a NodeIdentifier custom field so we can join these data with data from the CN node list. Override the fetch() method in the model to grab MN lat/lons.

For future reference, this is working:

```
curl -o - -k "https://redmine.dataone.org/issues.xml?project_id=20&tracker_id=9&cf_31=*&limit=100" | xml sel -t -m "/issues/issue" -v "concat(subject, '|', custom_fields/custom_field[@name='NodeIdentifier']/value, '|', custom_fields/custom_field[@name='Latitude']/value, '|', custom_fields/custom_field[@name='Longitude']/value)" -n
```

- Status changed from In Progress to Closed

- translation missing: en.field_remaining_hours set to 0.0

We're getting lat/lons per MN now using the /issues.xml REST API.
