Target version:	
Story Points:	
Description There are a large number of possible DataONE MN's running Data Access Protocol (DAP) compliant servers, particularly servers based on the OPeNDAP Hyrax and UCAR THREDDS servers. The objective of this work is to develop a MN stack that can be used with at least one of these DAP-compliant software stacks as a low-barrier route to becoming a Tier 1 MN.	
Subtasks: Task # 4053: Architect OPeNDAP MN In Progress
