<b>Description</b>			
It appears as though some nodes are reporting the node name rather than the node identifier when returning log records.			
There should be a test in the MN web tester to verify the nodeld is being accurately reported by a MN.			
(not sure if this is already being done)			
For example, USGS CSAS log entry:			
6505			
resourceMap_doi_10.5066_F7CF9N17.xml			
xxxxxx			
Java/1.6.0_38			
object
