Another issue with the getLogRecords response: the subject is listed as "node" or "object". The subject in the log records is meant to be indicative of the user invoking the method that triggers the log record creation. In the case of the DAAC this should be "public" since the node is a Tier 1 implementation.

#2 - 2013-10-14 18:50 - Dave Vieglaiss

Another issue is that the identifier is sometimes "none", which does not seem to be correct.
