Fix stmml:unit validation errors in KUBI EML

2013-10-08 00:42 - Chris Jones

Category:		Estimated time:	0.00 hour
Target version:	Operational		
Story Points:			
Description			
<p>After some digging, I found that the EML being produced by the KUBI MN is not synchronizing because of a validation problem with the stmml:unit elements being declared in the <code><stmml:unit></code> section of the EML. This likely wasn't easily noticed because the "EML Validation Service": http://knb.ecoinformatics.org/emlparser/ doesn't parse the content in the <code><stmml:unit></code> section other than to assure XML validity, but not schema validity.</p> <p>That said, the fix looks easy: stmml:unit can't have character content as a direct child since its definition specifies element content only as children (annotations removed):</p> <pre><xsd:complexType base="xsd:string" content="element" /></pre> <p>/xsd:choice</p> <pre><xsd:attribute base="xsd:string" /></pre> <p>/xsd:attribute</p> <p>/xsd:attribute</p> <p>/xsd:attribute</p> <p>/xsd:attribute</p> <p>/xsd:complexType</p> <p>/xsd:element</p> <p>So, the textual description of each custom unit needs to be wrapped in a <code><stmml:unit></code> tag, e.g:</p> <pre><stmml:unit id="Standard Deviation multiplied by 100" /></pre> <p>/stmml:unit</p> <pre></stmml:unit></pre> <p>I'd also suggest that the unit id attribute be a camel case id, which would be more consistent with ids found in the "EML unit dictionary": https://code.ecoinformatics.org/code/eml/tags/RELEASE_EML_2_1_1/eml-unitDictionary.xml. Something like:<pre><stmml:unit id="StandardDeviationMultipliedBy100" /></pre><p>This isn't a necessity, but may help in adopting these units into the next version of the unit dictionary.</p></p>
