

Infrastructure - Bug #4075

LogAggregatorTask fails with EmptyStackException due to ServiceFailure

2013-10-09 21:44 - Robert Waltz

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:	Robert Waltz	% Done:	100%
Category:	d1_log_aggregation	Estimated time:	0.00 hour
Target version:		Story Points:	
Milestone:	CCI-1.2		
Product Version:	1.2.0		
Description			
When the LogAggregatorTask receives a ServiceFailure from a membernode, it should retry the operation 5x before giving up.			
If the first time LogAggregatorTask runs and a ServiceFailure occurs, the job will fail with an EmptyStackException since logQueryDateRange has been popped off the stack, but not pushed back on before retrying the op.			
Also of note: LogAggregatorTask should stop when LogAggregator.active property has been set to false
