Target version:			
Description			
A reference implementation of the Member Node software should be developed in a standalone system that is able to be connected with a variety of data sources.			
Rationale			
This will be less efficient than directly implementing MN functionality on the target repository (e.g. MN API in Metacat), but provides a flexible alternative for rapid deployment.			
Fit Criteria			
<ul style="list-style-type: none">• The reference implementation is able to operate as a standalone Member Node• Fully implements the Member Node APIs• Passes all tests of MN functionality
