MN Description:	The Terrestrial Ecosystem Research Network (TERN) connects ecosystem scientists and enables them to collect, contribute, store, share and integrate data across disciplines.	Date Upcoming:	
Base URL:	http://www.tern.org.au/	Date Deprecated:	
NodeIdentifier:		Information URL:	
MN Tier:		Version:	
Software stack:	various		
Description			
TERN-Australia is a network of networks similar to LTER and KNB. It has a Data Discovery Portal for discovering and accessing data at its partner networks.			
POCs: Alison Specht a.specht@uq.edu.au Siddeswara Guru s.guru@uq.edu.au			
Currently in conversations about how TERN wishes to participate with DataONE with several technical and administrative questions to address. Tier TBD.

History

#1 - 2014-03-06 03:13 - Laura Moyers

As of 4 March, we are drafting a MOU which identifies 5 main focus areas for the TERN/DataONE collaboration. Intent is to firm this up the first half of 2014 with development activities on at least the first two focus areas anticipated for the second half of 2014 (all subject to change depending on MOU discussions, etc.).

#2 - 2014-03-25 15:46 - Ben Leinfelder

Recent communication revealed that they are running 3 Metacat instances. Could target more MNs - might be a separate tracker if we pursue them independently.
