Target version:	2014.18-Block.3.1		
Story Points:			
Description the latest tag is 1.2.5. Differences between trunk: CertificateManager: better javadoc statements, no new functionality D1Client: getMN(NodeReference) now sets the nodeId in the MNode object (bug fix or feature?) D1Node: recastClientSideExceptionToServiceFailure sets initCause (bug fix or feature?) DataPackage: improved javadoc statements, refactored getMap() new ExampleDataPackageUpload class ResourceMapFactory: new deserializeResourceMap and getOREModel methods - used for DataPackage size analysis - not sure if used elsewhere, but want to keep them. SysMetaModificationDateComparator: new class SysMetaUploadDateComparator: new class

because of the new comparator classes used by metacat-related products, it would be good to release under a new minor version, after a quick review of functionality to makes sure the behavior is standard - would implement a standard set of behaviors around those types.

The two SysMeta comparators seem very application-specific, comparing two system metadata objects and assigning them equal if the mod or upload dates match. Maybe they should be put in an org.dataone.client subpackage instead of service.types.v1

ResourceMapFactoryTest relies on a new test resource in d1_test_resources, so will merge that resource into latest branch to avoid creating a new branch from trunk that would include new untested java code.
