Description

Document the installation requirements and process for the python member node software

As the python MN stack developer I need to create a distribution of the software that can be installed easily on member node hardware.

- Document requirements for the MN hardware (or virtual hardware): RAM, disk space, processor, ...
- Document the system components that need to be installed (version, install process)
- Document the python module dependencies
- Document the configuration of the system components (apache config, where to install MN stack, ...)
- Document the steps necessary to install the MN software stack on a "clean" Linux machine
- Test the installation on a blank machine

- Independently verify installation

- Linux server (target Ubuntu 9.10+)

    - apache
    - python 2.6
    - mod fast cgi
    - django (web framework)
    - member node stack
