History

#1 - 2014-03-31 20:07 - Rob Nahf

- Subject changed from mvn dependencies:analyse shows transient dependencies: to mvn dependencies:analyse shows transitive dependencies:

backports was do to accidental import of math.emory.edu Arrays class in a couple tests cases. Replaced with the standard java ones to remove the dependency

confirmed authentic uses of classes in HttpComponents:httpcore (ExceptionHandler, SimpleMultipartEntity, MultipartRequestResolver, MultipartRequestHandler) - it is transitively included through httpmime dependency

javax-mail dependency seems to be replaced by the apache multipart equivalents
