Target version:	2014.26-Block.4.1	Story Points:	
Milestone:	CCI-1.2		
Product Version:	1.2.7		

Description

Please see the note on <https://redmine.dataone.org/issues/4467>.

It has the notes for update os and other softwares. The software include tomcat7, openjdk7 and postgresql 9.1.

Tomcat7 and openjdk7 don't come with the os upgrading. We need to install them separately. Postgresql9.1 does come with the os upgrade. But we need to migrate the data from 8.4 to 9.1.

Beside those three components, do we have other components need to be installed separately?

History

#1 - 2014-04-23 20:45 - Jing Tao

- Subject changed from Update stage-orc-2 to ubuntu 12.04 to Update cn-dev-orc-1 to ubuntu 12.04

David made a snapshot of the vm today. If we want to roll back, he can help me out.

#2 - 2014-04-23 21:01 - Jing Tao

On Ubuntu 10.04, the default slapd version is 2.4.21-0ubuntu5.7
On Ubuntu 12.04, the default slapd version is 2.4.28-1.1ubuntu4.
The Ubuntu 14.04 has 2.4.31-1+nmu2ubuntu8

They are all minor releases. So i think it is not necessary to update the ldap server. If we really want, maybe we can postpone to process of upgrading to Ubuntu 14.04.
