Filesystems filling up with postgres backup files

2014-06-10 07:22 - Robert Waltz

Status:	Closed	Start date:	2014-06-10
Priority:	Urgent	Due date:	2014-07-05
Assignee:	Robert Waltz	% Done:	100%
Category:	d1_cn_buildout	Estimated time:	0.00 hour
Target version:	2014.26-Block.4.1	Story Points:	
Milestone:	CCI-1.2		
Product Version:	*		

Description

/etc/cron.daily/pgsql script runs everyday and dumps a postgres backup to /var/postgres-bak

These dumps eventually fill up /var on the machines it is run and cause failures.

edit the /etc/cron.daily/pgsql to rotate its files only keeping month worth of dumps.

The dump from the first day of each month should be placed in a separate directory /var/postgres-bak/monthly.

monthly dumps should only be retained for 13 months at most. Each dump from the beginning of the year should be moved to /var/postgres-bak/yearly
