<b>Product Version:</b>	*		
<b>Description</b>			
on stage and production nodes, xinetd is configured to allow check_mk_agent to be run from 129.237.201.155 or 128.111.84.5.			
the configuration settings should either be automated with dataone-cn-os-core or be removed from operations.

Need to clarify what work needs to be done here. Is this still an issue? Why is the CN install affecting check\_mk\_agent?
