#### Description

Data One Pilot catalog needs to be deployed as a D1 search prototype. Basic version of pilot catalog is deployed in the cn-dev server, the following major tasks will have to be completed before it can be made available to broader group:

- UI style needs to be reviewed
- Advanced search options need to be reviewed (example; need to select metadata fields for the fielded search, also do we want to enable auto-complete/type-head feature for the fielded search? )
- Enable browse capability?
  
- Search Results:
  - o Fields for Facets need to be selected
  - o Metadata summary page: need to decide on the fields that are getting displayed
  - o Link to the data download need to be updated (currently it is pointing to the dataset location, but it needs to go via member node?)
  - o RSS links need to be updated: parametrized?
- Need to decide on the name (right now it says mercury3, may be datasearch?)
  - . metadata records for the initial prototype; currently, we have about 15 ORNL DAAC metadata records (merged Sci& Syst MD), can we add more from other MN sources?

#### History

- Status changed from New to Closed

Prototype catalog is available at

<http://public-web.dataone.org/node/4>

As per discussion with Rebecca, this will not be hooked in to the public web site navigation tree until the data tab on the web site can be populated.
