Description

During the postinst process for the indexer, the postgresql needs to be access via port 5432 on localhost 127.0.0.1

Before manipulating postgres, confirm that the port is open by ufw and if not, then open it up.

History

Also the replication component in dataone-cn-processing will need access to postgresql during updates - to configure a database schema and user.

For clarification - why is this port being closed on localhost before upgrades?
