Description			
The CN architecture will be modified in a future CCI release for single master mode (SMM). In preparation for this, d1_log_aggregation can be modified now to remove multi-master mode dependencies. This component will be refactored such that new event index entries will be created only on the active CN, but will be automatically synchronized to the passive CNs.			
Subtasks:			
Task # 5331: Remove Hazelcast dependency from Log Aggregation processing			Closed
Task # 6057: Replace manual recovery/synchronization of even indices with automatic method			Closed
