Verify Science Metadata content: Verify that the Science Metadata is present, complete and correctly formatted. i.e., can be opened in the applications that are designed to handle the formats.

Verify Science Metadata is returned with the correct HTTP Content-Type: The HTTP Content-Type header should correctly represent the Science Metadata when downloaded. For instance, EML , TIFF, and RDF documents should have Content-Type of text/xml, image/tiff, and application/rdf+xml respectively.

Verify that the Science Metadata is correctly processed by CNs: Verify that CNs are able to index any supported Science Metadata objects. Successfully indexed objects appear in the Solr index. Not all Science Metadata formats are supported by DataONE. If the MN does not expose any supported objects, this ticket can be closed directly.

#2 - 2016-05-06 15:29 - Mark Servilla

- Status changed from New to Closed
- Start date set to 2016-05-06
- % Done changed from 0 to 100
