Milestone:	None	**Story Points:**	
Product Version:	*		

Description

Noticed during replication auditing and replication operations in production that mn-unm-1.dataone.org does not appear to be accepting authenticated requests from production CN machines.

Observed effecting 'get', 'checksum', and 'replicate' requests against non-public read content. Robert confirmed with libclient test that mn-unm-1.dataone.org is not accepting authenticated requests from production CN machines.

- Assignee changed from Chris Jones to Jing Tao

The version of the Metacat is 2.0.5. New release of metacat fixed the issue. So we need to upgrade Metacat in that machine.

- Due date changed from 2014-09-25 to 2014-09-26

The metacat was upgraded to version 2.4.1 and the http connection has been redirected to https.

Skye. Would you please try again?

There was another issue - the DataoneCAChain.pem was not a correct copy. I downloaded one from the repository and restarted apache.

Skype and I tested it by a curl command. It worked.
