Metacat seems to be handling this case fine. The unit test was failing for several reasons. 1) the user was not logged in. you must be logged in (have a valid, non-public token) to run create(). 2) the test was attempting to insert the same document with the same identifier multiple times. you must provide a unique id on create().

I modified the unit test to show that create will work with a guid of the form xxx.\d.\d(\.\d)+

let me know if there are further problems with this and I'll take a look. closing this bug for now.
