**Description**

I tried to install maven in the machine and it doesn't work.

I tried "apt-get upgrade" and got an error:

```
Reading package lists... Done
Building dependency tree

Reading state information... Done
You might want to run `apt-get -f install' to correct these.
The following packages have unmet dependencies:
vmware-open-vm-tools-nox: Depends: vmware-open-vm-tools-common (= 8.3.19-0.1310361) but 8.3.17-0.870839 is installed
E: Unmet dependencies. Try using -f.
```

Then I treid "apt-get -f install" and got:

```
(Reading database ... 220301 files and directories currently installed.)
Preparing to replace vmware-open-vm-tools-kmod-2.6.32-21-generic 8.3.17-0.870839 (using
