Category: d1_cn_service	Estimated time: 0.00 hour
Target version: CCI-0.4	
Story Points:	
Description (cn_api_crud.html#CN_crud.resolve) Query metacat for objects of type systemmetadata where identifier = ID, then parse system metadata to extract object location (which MNs), construct response object and return to client	

History

#1 - 2010-06-15 03:58 - Matthew Jones

Note that no querying is necessary -- you should be able to just call Metacat's `getSystemMetadata(Identifier)` method to get the [SystemMetadata](#) object back, and then this java object should already have accessors for the replica locations.

#2 - 2010-08-12 20:47 - Rob Nahf

implementation is working for xml data. Implementations for json and csv are roughed out, but not tested. The rest of the implementation will be under new tickets.
