Target version:	CCI-2.0.0		
Story Points:			
Description			
New search index field and provide logic to populate the field.			
Potentially add SID value to the 'identifier' field so that both SID and PID are present in the identifier field to support queries against either value against the same field.

I would prefer to NOT add the SID field to the current identifier field that contains exclusively PIDs. We need a field in the index that will reliably give the PID for any object, and all objects will still have a PID in the new system. If we need a combined field with PID and SID, I think we should create it as a new field. Many calling apps may now assume the identifier field contains the PID, and so changing its semantics could break some client apps. Adding a new field would not.
