

Python GMN - Bug #6767

GMN crashes if the replication target is not responding

2015-01-22 19:11 - Dave Vieglais

Status:	New	Start date:	2015-01-22
Priority:	Normal	Due date:

Target version:			
Story Points:			
Description			
Hays reports that his GMN instance was hanging due to a large number of attempted connections to a replication target that was not responding.			
GMN should be defensive when connecting to external services, either queuing requests or failing them.			
GMN should also be terminating connections if the action does not complete within "a reasonable period of time"
